

Water Resources • Flood Control • Water Rights

MEMORANDUM

DATE: August 18, 2016
FROM: Gilbert Cosio, Jr., P.E.
SUBJECT: Reclamation District No. 999, 2016 Assessment, Engineer's Report

Introduction

The purpose of this Engineer's Report (Report) is to estimate and justify the need for Reclamation District No. 999 (RD 999 or District) to incorporate a new assessment to be issued in 2016 and collected in the beginning of 2017 (New assessment). This Report evaluates and incorporates the information developed in 1997, the last time the RD 999 assessment roll was modified. The 1997 assessment commissioners (1997 commission) performed extensive work to describe the benefits received by each parcel (See "Assessment Report Accompanying Operation and Maintenance Assessment Roll for Reclamation District No. 999," prepared by John Wright, Kenneth Ruzich, and Thomas Hardesty, dated July 29, 1997, and incorporated herein). We have reviewed the 1997 commission report and confirm that the factors calculating the benefit received by each parcel were correct and have utilized that information herein. We have also reviewed the operations of the District, the operating deficit of the District, and the near-term projected funding needs of the District, to evaluate the total costs to be incurred by the District in providing the services proposed. The funds required to pay for RD 999 operations have changed dramatically since 1997; therefore, the purpose of this report is to set a new assessment rate in order to generate the funds required to continue operation of RD 999.

This Engineer's Report was prepared to:

1. Contain the information required by Government Code Section 54716, including:
 - a. a description of the service proposed to be financed through the revenue derived from the assessment
 - b. a description of each lot or parcel of property to be subject to the assessment
 - c. the amount of the proposed assessment for each lot or parcel
 - d. the basis of the assessment
 - e. the schedule of the assessment
2. Establish a budget to provide services and improvements for irrigation supply, for drainage services, to reduce the potential for levee failure and flooding, and to provide other flood control services
3. Determine the benefits received from the services by property within Reclamation District 999

4. Assign a method of assessment apportionment to lots and parcels within the District

This Report and the proposed assessments have also been made pursuant to the California Government Code Section 53750 et seq. and Article XIIIID of the California Constitution.

General

The District was created by a special act of the State Legislature, approved May 22, 1913 and in effect August 10, 1913 (Stats. 1913:242). The boundaries were changed and modified by an act approved April 9, 1919 and in effect July 22, 1919 (Stats. 1919:66). The area in Yolo County includes portions of the previous Reclamation Districts 146 and 472.

Reclamation District No. 999, Netherlands, comprises an area of 25,542 acres in Yolo and Solano Counties. It includes portions of Townships 5, 6, 7, and 8 North, Ranges 3 and 4 East, Mount Diablo Base, and Meridian.

The District is bounded on the extreme north by Reclamation District 900. The northerly four miles is limited to a triangle area and a somewhat parallelogram shaped area, each about two miles in length and about a mile in width, having irregular easterly boundaries which are defined by the westerly boundaries of Reclamation District 765 and Reclamation District 307. The southerly 11 miles of Reclamation District 999 is bounded on the east by the Sacramento River, Sutter Slough, and Elk Slough and on the south by Miner Slough. The District is bounded on the west by the Sacramento Deep Water Ship Channel and Little Holland Tract.

The District is completely protected from overflow by a system of substantial levees constructed well above floodplain. It is adequately drained by a system of natural and artificial drainage channels and pumping plants. It is also both surface and sub-irrigated by the interconnected 260-mile network of irrigation and drainage canals and siphons and pumping plants. The soils are classified as Columbian silt loams and Sacramento clay loams. State Highway No. 84 and a branch line railroad traverse the entire length of the District.

The lands of the District are generally flat, naturally draining to depressions in the land contour and to the adjacent Sacramento River and its tributary sloughs. The highest lands, along the northerly boundary of the District, have an elevation of about 10 feet (NGVD) and the lower lands in the central and south part of the District have an elevation of about sea level. Excepting those parcels used for residential, commercial, or accessory building sites, all of which have been graded for drainage, most of the land within the District has been levelled for surface irrigation.

District lands are generally free of harmful quantities of alkali salts, and the underlying hard pan is not an impediment.

District Works & Services

Reclamation Works – Levees and Drainage

Reclamation District No. 999, the Holland Lands, is responsible for maintenance of the levees around the perimeter of the District. The levees for which the District is responsible consist of the following:

Unit No. 1, East levee Yolo Bypass	15.43 miles
Unit No. 2, Right bank levee Miner Slough	2.32 miles
Unit No. 3, Right bank levee Sutter Slough	3.74 miles
Unit No. 4, Right bank levee Sacramento River	1.22 miles
Unit No. 5, Right bank levee Elk Slough	9.66 miles
Total	32.37 miles

All of these levees are part of the Sacramento River Flood Control Project. The Reclamation District 999 levees have a crown width generally in excess of 20 feet and contain a paved or graveled County road, or a suitable all weather maintenance road.

The drainage system consists of approximately 260 miles of ditches approximately 4 to 6 feet deep throughout the District. Generally, an outlet for land drainage is provided to at least each quarter section.

Gravity drainage to surrounding waterways is not available. Most of the District's drainage laterals discharge to the centrally located Duck Slough and to the Main Drainage Canal. Drainage water for that portion of the District protected by levees is pumped, at various locations, over the levee by District pumping plants. Localized flooding can be expected throughout the District during significant storm events. It is not expected that the drainage facilities of the District will prevent localized flooding, but rather, will moderate the depth and duration of such flooding and facilitate the removal of storm and flood waters from District lands. It is assumed herein that the District's drainage pumping plants will be used at all times when drainage, as determined by the District, is needed.

Irrigation and Distribution Works

The District irrigation system's principal point of diversion is on the upper portion of Elk Slough, which is tributary to the lower Sacramento River. The irrigation system consists of one primary siphon at the District headquarters and a pumping plant located in the Sacramento Deep Water Ship Channel. The District uses the drainage canal network to distribute water throughout the service area. The District's siphon is capable of diverting up to 114 cubic feet per second (cfs). The District's water right is based upon a pre-1914 claim, the riparian water rights doctrine, and appropriative rights. The North Delta Water Agency agreement with the State of California provides an additional level of security to water availability.

Water service is provided to most developed agricultural parcels within the District. Water is siphoned or pumped into the District before delivery, and some District land requires an additional pump lift to make delivery possible.

Benefit of Works

The Reclamation District No. 999 flood control and drainage works previously described provide benefits to all lands, natural gas reserves, and other mineral resources within the District, regardless of use and productivity. These benefits are the protection for the lands, improvements, dwellings, gas field wells, and other mineral reserves from flood waters of the streams, creeks, rivers, and bypasses which empty into the Sacramento-San Joaquin Delta, and removal of storm and seepage waters. Benefits result from the maintenance and operation of the drainage and irrigation canals, ditches, pumping plants and levees. There are dwellings, farm related facilities, and natural gas well sites located within the District that enjoy drainage and flood protection. Access to these improvements is by roadways protected by District maintained levees and drainage facilities.

Basis for Determination of Benefits

The principal purpose of the 1997 evaluation was to establish the benefit attributable to the works of the District for each parcel of land within the District, and to spread the cost of maintenance and operation of such works on the lands in a fair and equitable manner in proportion to the benefits received, as provided in the State Water Code (Sections 51230-51349) and the California Constitution.

To obtain this desired goal, the lands of the District were reviewed by the 1997 Commissioner and consideration was given to the following factors:

1. Relative values of the primary special benefits provided by the District are drainage, levee protection, and irrigation, including apportionment of the overhead and administrative costs of the District attributable to those benefits.
2. The historical cost of providing for the operation and maintenance of the District facilities, excluding therefrom, major unamortized capital improvements and the variable costs of supplying irrigation water. It was assumed that the District would not undertake significant service extensions or improvements in the foreseeable future, and that it is both appropriate and expected that the District will collect funds from water users to cover the variable costs of providing that service. The 1997 commission determined that it was not practicable to incorporate, within the assessment valuations of the respective parcels, the benefit received from year to year by the varying amounts of irrigation water utilized or not utilized on each parcel during that particular year, and that instead the methodology used to apportion the benefits and costs fairly captured the long-term use of water by landowners.
3. The materially increased rates of storm water runoff from developed residential and commercial parcels requiring increased drainage capacity.

The services to be undertaken by Reclamation District 999 and the cost thereof, paid from the levy of the annual assessment, provide special benefit to parcels within the District. In addition to the definitions provided by the California Government Code Section 54710 et seq., the services are generally described as follows:

- Retirement of any outstanding debt
- Operation and maintenance of any District reclamation, drainage or irrigation works
- Payment of incidental expenses
- The construction of supplemental reclamation and irrigation works
- The replacement of equipment, operating facilities and works
- The establishment of an appropriately sized reserve fund designed to address large unplanned expenses such as flood fighting or pump replacement.

Assessment Procedure and Roll

The assessment valuations determined on the Assessment Roll are used as a basis for levying assessments against the parcels described in the operation and assessment roll for the purpose of raising funds for the maintenance, repair, and operation of the District works, the payment of incidental expenses thereof, and for the construction of reclamation works supplemental to, or in replacement of, those already possessed when, in the opinion of the District, such works are necessary for carrying out the original or any supplemental flow. The Assessment Roll, parcel acreages, and the method to calculate the assessment for each parcel were established by the 1997 commission and are not being modified at this time, nor is the benefit to each parcel.¹ I have reviewed the 1997 commission methodologies and current financial statements and concur that the 1997 commission's methodologies remain pertinent and supported by the current records of the District and I hereby incorporate by reference the 1997 report, its methodology, and its application of the costs to each parcel.

New Assessment

The purpose of the New Assessment is to generate funds necessary for RD 999 to cover current annual operating expenses, retire current debt, cover future increases in annual operating expenses, and begin to establish a reserve fund for future anticipated large capital expenses.

The current rate of assessment has not been raised since 1997. At that time, this rate was satisfactory to cover all the expenses anticipated at the time. Currently, the approximate \$650,000 generated by this rate fails to cover the approximate \$850,000 annual operating expenses, generating an operating deficit of \$200,000 per year.

The New Assessment will begin to retire this debt. As described above, the old assessment rate currently comes up about \$200,000 short of meeting current annual operating expenses; therefore, RD 999 has had to borrow funds through a line of credit to meet annual expenses. The outstanding debt is currently around \$450,000.

Between 1997 and 2016, The District's annual operation expenses increased

¹ We note that the language on Page 18 of the 1997 Report suggests that future land use changes associated with residential would be assessed based on land value. That section should more properly reflect the flood control, irrigation, and drainage benefits to such property that are newly calculable as a result of conversion to residential.

significantly. There are various reasons for this increase. First, costs have gone up significantly since 1997. Comparison of the consumer price index (CPI) for the San Francisco Bay region shows a 67% increase in CPI between 1997 and 2016. Regulatory changes in dealing with irrigation, drainage, and flood control have increased costs.

RD 999 was formed over 100 years ago. Some of its largest and most important features, such as drainage pumps and appurtenant structures, are nearly 100 year old. Along with increasing costs to maintain these old features, RD 999 anticipates some will have to be replaced in the future.

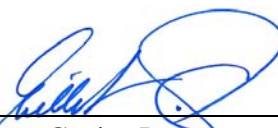

Therefore, based on the above, RD 999 is proposing a new maximum assessment rate of \$3.45/\$100 assessed valuation. The attached table shows the total assessment for each parcel. This rate will generate \$1.291 million per year at this maximum assessment rate. This rate represents a \$441,000 increase over the current actual operations budget of \$850,000. This \$441,000 will benefit each of the parcels in the District in accordance to the existing benefit methodology by: (1) paying down debt, (2) supplementing the existing District budget to address new best management practices for irrigation service, drainage service, and flood protection in proportion to the current cost and benefit allocation, and (3) developing a reserve fund that will be equally beneficial to all of the functions of the District.

The proposed New Assessment is also subject to an annual adjustment tied to the annual change in the Consumer Price Index for the San Francisco Bay Area as of December of each succeeding year, with the maximum annual adjustment not to exceed 4%.

In the event that the actual assessment rate for any given year is not increased by an amount equal to the maximum of 4%, or the yearly CPI change plus any CPI change in previous years that was in excess of 4%, the maximum authorized assessment shall increase by this amount. In such event, the maximum authorized assessment shall be equal to the base year assessment as adjusted by the increase to the CPI, plus any and all CPI adjustments deferred in any and all prior years. The CPI change above 4% can be used in a future year when the CPI adjustment is below 4%.

The Operation and Maintenance Assessment Roll filed contains the necessary information, all as prescribed by the California Water Code, Section 51324.
